

Maximum Awards Acquires 3 Major Ecommerce Groups!

Maximum Awards Inc. (MXRW)

\$2.30

MXRW, a huge corporate travel group is expanding! They have announced there acquiring 3 major E-Commerce groups, Playsonthenet.com, annesdiary.com, and curtainrising.com. Go read up on MXRW and be ready. A huge news release is expected on Monday! Get On MXRW!

We run training courses on Deploying both servers in combination and also on Deploying httpd under Linux.

Search engines have improved hugely over the years, and the proportion of rogue pages offered has dropped - but it's still a serious issue.

usually to a relevant page for them, but sometimes to the wrong page on the right site.

Give a pointer to the answer that "George" - not his real name - was asking.

I've many other pictures too, and snippets to write, but they can wait for the morning.

And indeed it might be lower cost for callers from certain mobile packages to call those numbers rather than the freephone number.

Give a pointer to the answer that "George" - not his real name - was asking.

What is the answer to the question asked?

And indeed it might be lower cost for callers from certain mobile packages to call those numbers rather than the freephone number.

If you set up a free or cheap web site, you'll probably find that your hosting company is using httpd - but there's nothing cheap about the facilities it offers!

You'll see it start to appear on the web site very shortly.

And so the Apache team grew into the Apache Software Foundation, with the mechanism used not only for their original web server, but also for many other projects.

The fact that you went down as far as the sixth page being offered rather shows how this is a very general problem and not specific to our site.

I know it's not saying much, but it was the best weather of the week, and the crowds were out.

I've many other pictures too, and snippets to write, but they can wait for the morning.

And here in the fields, the cows are grazing on Woollamore farm.

So - we've taken a fresh look at current and future needs and we're setting up a brand new scheme.

Tomcat is a web server too, and you may wonder at the Apache people in welcoming into their club a piece of software that appears to compete with their original httpd.

You'll see it start to appear on the web site very shortly.

We run training courses on Deploying both servers in combination and also on Deploying httpd under Linux.

the problem is identifying which one!

Why did you land where you did?

I'll contrast the web servers in a minute.

You'll see it start to appear on the web site very shortly.

Tomcat is a web server too, and you may wonder at the Apache people in welcoming into their club a piece of software that appears to compete with their original httpd.

If you set up a free or cheap web site, you'll probably find that your hosting company is using httpd - but there's nothing cheap about the facilities it offers!

Our answerphone message is as friendly as it can be, but we still get far, far too many hangups.

What is the answer to the question asked?

What is the answer to the question asked?

Why did you land where you did?

I'll contrast the web servers in a minute.

Search engines often bring visitors to our web site.

It's in everyone's interest to have these things tailored as best as possible.

and, yes, I enjoy this sort of thing.

You can use it "standalone" too, and we often do so; to develop a whole lot of functions for web use in PHP, then duplicates in some other language, would be frankly silly after all.

You can use it "standalone" too, and we often do so; to develop a whole lot of functions for web use in PHP, then duplicates in some other language, would be frankly silly after all.

Give a pointer to the answer that "George" - not his real name - was asking.

As you can see, the weather smiled on us and I couldn't resist snapping this picture of "Brutus" - probably not his real name - enjoying a refreshing drink of water.

Tomcat is a web server too, and you may wonder at the Apache people in welcoming into their club a piece of software that appears to compete with their original httpd.

I know it's not saying much, but it was the best weather of the week, and the crowds were out.

So - we've taken a fresh look at current and future needs and we're setting up a brand new scheme.

This year, I helped with a stand at Party in the Park and got a few minutes to go around and take a few snaps too.

Search engines often bring visitors to our web site .

Give a pointer to the answer that "George" - not his real name - was asking.

And I've made an interesting discovery - that the phpinfo function reformats its output well for the command line.

And I've made an interesting discovery - that the phpinfo function reformats its output well for the command line.

If you set up a free or cheap web site, you'll probably find that your hosting company is using httpd - but there's nothing cheap about the facilities it offers !

usually to a relevant page for them, but sometimes to the wrong page on the right site.

With two morning drinks and snacks services, and one mid-afternoon too, I was kept on my toes!

Here's an edited copy of an answer I've just sent to one such arrival, who was so upset at getting the wrong page that he wrote to me twice - two different emails - within a few minutes.

Really a fantastic piece of software.

Really a fantastic piece of software.

And so it is that during the current course, I've been running rather more demos from the command line than I usually would - it suits the group, and works well

Ah - this week's PHP course and we got on to image handling again!

Just for the moment, I want a relaxing cool down and a good night's sleep!

You can use it "standalone" too, and we often do so; to develop a whole lot of functions for web use in PHP, then duplicates in some other language, would be frankly silly after all.

If you set up a free or cheap web site, you'll probably find that your hosting company is using httpd - but there's nothing cheap about the facilities it offers !

And how did Mike and Tony - two PHP delegates - manage to sneak in here?

Tomcat is a web server too, and you may wonder at the Apache people in welcoming into their club a piece of software that appears to compete with their original httpd.

And so the Apache team grew into the Apache Software Foundation, with the mechanism used not only for their original web server, but also for many other projects.

You can see what an interesting and varied week this has been - and a pleasure in all quarters.

And so the Apache team grew into the Apache Software Foundation, with the mechanism used not only for their original web server, but also for many other projects.

What is the answer to the question asked?

If you haven't solved your question yet, please let me know a little more about what you're wanting to "look up" in PHP, and I'll drop you a full answer.

I know it's not saying much, but it was the best weather of the week, and the crowds were out.

Tomcat is a web server too, and you may wonder at the Apache people in welcoming into their club a piece of software that appears to compete with their original httpd.

Give a pointer to the answer that "George" - not his real name - was asking.

This is a freephone number - called from a UK landline it won't cost you anything.

Ah - this week's PHP course and we got on to image handling again!

You can see what an interesting and varied week this has been - and a pleasure in all quarters.

Really a fantastic piece of software.

Would you like ideal facilities of BOTH in your own application?

Why did you land where you did?

Tomcat is a web server too, and you may wonder at the Apache people in welcoming into their club a piece of software that appears to compete with their original httpd.

This year, I helped with a stand at Party in the Park and got a few minutes to go around and take a few snaps too.

And so the Apache team grew into the Apache Software Foundation, with the mechanism used not only for their original web server, but also for many other projects.

And one such sub-project was Tomcat - also known as Jakarta Tomcat and Apache Jakarta Tomcat.

It was a lovely day, and we chose to serve lunch in the marquee - we can offer a wide variety of food, this group choosing a cold buffet but with hot potatoes, self service.

Just for the moment, I want a relaxing cool down and a good night's sleep!

Why did you land where you did?
